

China Data Compliance Solution

Since the adoption of the Cybersecurity Law, which became effective in 2017, China has introduced a range of laws, regulations and policies touching on all aspects of the data governance space. To name a few:

- Data Security Law
- Personal Information Protection Law
- E-Commerce Law (Regulation on Protecting the Security of Critical Information)
- Personal Financial Information Protection Technical Specifications

Essentially, every business starting or operating in China has to set up its own data management infrastructure. Depending on the type of business this may include:

- Applying for an ICP licence
- Adapting the website for privacy compliance
- Putting protocols in place for data breaches, data transfers, data protection and data privacy
- Appointing a responsible officer
- Conducting a data protection impact assessment
- Ensuring data security capabilities based on local standards
- Applying for MLPS certification

Chinese data governance rules may or may not be compatible with existing rules in the country of origin of the new entrant.

Many businesses already have infrastructure in place in their home country. Savings can be achieved if all or part of this infrastructure can be rolled out to China, but this is not always easy. If a group of companies is already active under multiple regulatory regimes, the challenge to set up the China infrastructure can get complex and costly.

Equasia has developed an end-to-end solution, which will be delivered based on your specific needs, which includes:

- An introduction of China's data regime
- A risk analysis with recommendations
- A China-based data governance strategy
- A set of protocols
- A set of policies
- Staff training divided in different topics for strategy implementation

Our solution will enable you to enter, or continue in, the Chinese market with confidence at an affordable rate.

Based on our solution, we have designed a quick assessment form to make an initial assessment of your needs.

Completing the form will enable us to provide you with a first assessment and the estimated cost of our solution.

Our assessment is entirely free of charge, including a 30-minute online meeting with our experts to discuss our findings with you in the strictest confidence.
